

LEAVE MANAGEMENT SYSTEM

Microsoft Power Platform

Project Documentation

Developed By: Shubham Kokitkar

1. PROJECT OVERVIEW

The Leave Management System is a business application developed using Microsoft Power Platform to manage employee leave requests, approvals, leave calendars, reporting, and administration.

The application provides a centralized solution for employees, managers, HR, and administrators to manage the complete leave lifecycle.

Main Objectives

- Submit and manage leave requests
 - Provide manager approval workflows
 - Track leave request status
 - Display approved leaves in a calendar
 - Provide reports and analytics
 - Manage organization settings
 - Support role-based administration
 - Manage attachments related to leave requests
 - Provide search, filtering, and pagination
 - Automate notifications and approvals
-

2. TECHNOLOGY STACK

Technology	Purpose
Power Apps	Canvas application and user interface
SharePoint	Data storage and list management
Power Automate	Approval workflows and automation

Technology	Purpose
Power BI	Reports and analytics
Power Fx	Application logic and formulas
Microsoft 365	Platform integration

3. APPLICATION ARCHITECTURE

The Leave Management System uses Power Apps as the front-end application, SharePoint for data storage, Power Automate for workflow automation, and Power BI for reporting and analytics.

Architecture

Show in Calendar / Reports

Detailed Workflow

1. Employee enters leave details.
2. The application validates the leave request.
3. The request is saved to SharePoint.
4. Power Automate is triggered.
5. The manager receives an approval request.
6. The manager approves or rejects the request.
7. The request status is updated.
8. The employee receives a notification.
9. Approved leave is displayed in the Leave Calendar and Reports.

Application Modules

1. Dashboard

The Dashboard is the main screen of the Leave Management System.

It provides users with a centralized overview of leave requests, leave status, leave balance, and quick access to application modules.

Dashboard Features

- Leave summary cards
- Approved leave requests
- Pending leave requests

- Rejected leave requests
- Total leave information
- Leave balance
- Search leave requests
- Status filtering
- My Leave Requests
- Quick Apply Leave button
- User profile information
- Notification indicator
- Navigation menu

How the Dashboard Works

Step 1 - Open Application

The user opens the Leave Management System.

Step 2 - User Information

The application displays the logged-in user's name and role in the top-right corner.

Step 3 - Load Leave Data

The application retrieves leave request information from SharePoint.

Step 4 - Calculate Leave Summary

The Dashboard calculates and displays:

- Approved requests
- Pending requests
- Rejected requests
- Total leaves
- Leave balance

Step 5 - Search Requests

The user can enter text in the search box to find leave requests.

Step 6 - Filter Requests

The user can select a status from the filter dropdown.

Example:

All

Pending

Approved

Rejected

Cancelled

Step 7 - View Leave Requests

The **My Leave Requests** section displays the employee's leave requests.

Each request can display:

- Employee name
- Leave type
- From date
- To date
- Status
- Request details

Step 8 - Apply Leave

The user can click:

+ Apply Leave

to navigate to the Apply Leave module.

2. Apply Leave

The Apply Leave module allows employees to submit new leave requests.

Apply Leave Features

- Leave type selection
- Priority selection
- Start date
- End date
- Number of days
- Department
- Leave reason
- Optional attachment
- Form validation
- Submit Leave
- Clear form

Submit Leave

How Apply Leave Works

Step 1 - Select Leave Type

The employee selects the required leave type.

Example:

Annual Leave

Sick Leave

Casual Leave

Other Leave

Step 2 - Select Priority

The employee selects the priority of the leave request.

Example:

Low

Medium

High

Step 3 - Select Start Date

The employee selects the leave start date.

Step 4 - Select End Date

The employee selects the leave end date.

Step 5 - Calculate Number of Days

The application calculates the number of leave days based on the selected dates.

Step 6 - Select Department

The employee selects the applicable department.

Step 7 - Enter Reason

The employee enters the reason for requesting leave.

Step 8 - Add Attachment

The employee can optionally attach supporting documents.

Step 9 - Submit Leave

The employee clicks:

Submit Leave

Step 10 - Save Request

The leave request is saved to the SharePoint Leave Requests list.

Step 11 - Trigger Approval

After submission, Power Automate processes the approval workflow.

Apply Leave Process

Employee enters leave details

Form validation

Calculate leave duration

Submit request

Create SharePoint record

Trigger approval workflow

3. My Requests

The My Requests module allows employees to view and track their submitted leave requests.

Features

- View submitted requests
- Search requests
- Filter by status
- Filter by leave type
- View request details
- View approval status

- View attachments
- Pagination
- Request ID
- Applied date

How My Requests Works

Step 1 - Open My Requests

The employee selects **My Requests** from the navigation menu.

Step 2 - Load Requests

The application displays the employee's submitted leave requests.

Step 3 - View Summary

Summary cards display:

- Total Requests
- Pending
- Approved
- Rejected

Step 4 - Search

The employee can search for a specific request.

Step 5 - Filter

The employee can filter requests based on available filter options.

Step 6 - View Request

The employee can click **View** to see additional request information.

Step 7 - Pagination

When multiple records are available, pagination allows the employee to navigate through the requests.

4. Manager Approval

The Manager Approval module allows managers to review employee leave requests.

Features

- Total requests
- Pending requests
- Approved requests
- Rejected requests
- Search employee
- Status filter
- Leave type filter
- Date filter
- Review leave details
- Approve request
- Reject request
- Pagination

How Manager Approval Works

Step 1 - Open Manager Approval

The manager selects **Manager Approval** from the navigation menu.

Step 2 - View Requests

The manager can view employee leave requests.

Step 3 - Search Employee

The manager can search for an employee.

Step 4 - Apply Filters

The manager can filter requests using:

- Status
- Leave Type
- Date

Step 5 - Review Request

The manager reviews:

- Employee
- Leave Type
- From Date

- To Date
- Days
- Priority
- Status

Step 6 - Approve or Reject

The manager can select:

Approve

or

Reject

Step 7 - Update Request

The request status is updated based on the manager's decision.

5. Leave Calendar

The Leave Calendar provides a visual representation of employee leave schedules.

Features

- Monthly calendar
- Previous month navigation

- Next month navigation
- Month view
- Week view
- Day view
- Leave type filter
- Employee filter
- Upcoming leaves
- Leave summary
- Approved leave display
- Today indicator

[illegible]

How Leave Calendar Works

Step 1 - Open Leave Calendar

The user selects **Leave Calendar** from the navigation menu.

Step 2 - Select Month

The user can navigate between months.

Step 3 - Select Calendar View

The application supports:

Month

Week

Day

Step 4 - Filter Leave Types

The user can filter the calendar by leave type.

Step 5 - Filter Employees

The user can filter the calendar by employee.

Step 6 - Display Approved Leaves

Approved leave requests are displayed on the calendar.

Important: Only approved leave requests should be displayed as confirmed leave in the calendar.

Step 7 - View Summary

The Leave Summary section provides information such as:

- Total Requests
- Upcoming
- Approved
- Rejected

6. Reports

The Reports module provides leave-related analytics using Power BI.

Features

- Leave analytics
- Total leaves
- Approved leaves
- Pending leaves
- Rejected leaves

- KPI dashboard
- Leave trend analysis
- Reporting navigation

How Reports Works

Step 1 - Open Reports

The user selects **Reports** from the navigation menu.

Step 2 - Load Power BI Report

The Power BI report is displayed inside the application.

Step 3 - View KPIs

The report can display:

- Total Leaves
- Approved Leaves
- Pending Leaves
- Rejected Leaves

Step 4 - Analyze Leave Data

Power BI can be used to create:

- Leave Type Chart

- Monthly Leave Trend
- Leave Status Chart
- Department-wise Leave Report
- Employee Leave Statistics
- KPI Dashboard

Security Settings

Security settings provide application-level configuration options.

Features

- Security configuration
- Access-related settings
- Role-based behavior
- Administrative controls

Skills Demonstrated

Power Platform

- Power Apps
- Power Automate
- Power BI
- Power Fx
- Canvas Apps
- SharePoint
- SharePoint Lists
- Microsoft 365 integration

Application Development

- CRUD operations
- Form validation
- Search and filtering
- Pagination
- Approval workflows
- Data management
- UI/UX design
- Dashboard development
- Reporting and analytics
- Role-based application behaviour

Future Enhancements

Possible future improvements include:

- Dataverse integration
- Microsoft Teams notifications
- Advanced role-based security
- Mobile-responsive improvements
- AI-based leave recommendations

- Advanced Power BI dashboards
 - Email notification templates
 - Audit history
 - Advanced administrator controls
-

Project Purpose

This project demonstrates practical experience in building a business application using Microsoft Power Platform.

The solution combines:

Power Apps

+

SharePoint

+

Power Automate

+

Power BI

=

Business Application

The project demonstrates the complete flow from employee leave submission to manager approval, SharePoint data management, automated notifications, calendar tracking, and reporting.

Portfolio Note

This project is intended to demonstrate Power Platform development skills, application architecture, workflow automation, SharePoint integration, reporting, and business application design.

All repository content should be sanitized before publishing publicly.
